EDUCATION

- **Indian Institute of Technology, Jodhpur** Jodhpur, Rajasthan
Bachelor of Technology in Computer Science and Engineering; July. 2018 – June. 2022

EXPERIENCE

- **Warner Bros. Discovery** Hyderabad, India
Software Engineer 2 (Full Stack) Nov 2024 - Present
 - **AI Tools and Frameworks:**
 - Developing a general-purpose AI platform for 25,000+ employees, leveraging a Multi-Agent architecture to deliver data-driven insights and general knowledge using Retrieval-Augmented Generation (RAG). Built with LangGraph, OpenSearch, and Next.js, the platform enables real-time, context-aware insights, enhancing efficiency, decision-making, and innovation across teams.
 - Designed and implemented the AI evaluation system using DeepEval, LangChain, OpenAI SDK, improving assessment accuracy of RAG workflows and translation models by 27%.
 - Transformed the existing AI application from a monolithic backend into a scalable platform that supports multiple applications via machine-to-machine API integration, enabling seamless interoperability using FastAPI.
- **Deloitte** Hyderabad, India
Software Engineer (Analyst) July 2022 – Nov 2024
 - **Client Outlook add-ins:**
 - Solved compliance and security challenges by leading development of S2SACC Outlook add-in in ReactJs, Yeoman, Python, MS GraphAPI, API Gateway, S3, facilitating document transfer to ContentCloud via email, with access based on distribution groups. Deployed and serving 500+ users, set to scale to over 1000.
 - Developed the S2EDS Outlook add-in used to send documents to enterprise servers from mailbox using ReactJs, Yeoman, Python, CodePipeline serving 500+ users.
 - **Document Archival Applications :**
 - Led migration of services from Mule ESB to AWS Lambda for the Document Archival system, optimizing costs and improving performance. Maintained four critical Java applications, ensuring seamless business operations.
 - Developed the UI for the Capture Page of DocuEdge Archiving Solution using AngularJS and Syncfusion, currently serving 2 client organizations.

PROJECTS

- **RustyBun (Opensource):** Published RustyBun, a clipboard management application designed to streamline your workflow by providing convenient access to clipboard items on Linux distributions using Rust and Electron
- **X86 Architecture OS:** Built a 32-bit operating system with keyboard input, VGG output driver, and a functional shell for basic tasks using Assembly language and C
- **RGB face video data to Core body Temperature:** Implemented CNN models using TensorFlow for core body temperature prediction using diverse image data (NIR, Hyper-spectral, RGB) to achieve 60% accuracy
- **Hashtag Analysis:** Analyzed hashtag-driven social networks on Twitter and Koo using Selenium and Pandas to gauge real-world impact and structure, with a focus on popular societal hashtags for successful online engagement
- **Edge based knowledge inference for InVANETs:** Reduced the data transferred between vehicles and RSUs using NS3 & SUMO to minimize RSU processing power needs by 71% and enable calculations regardless of network strength

SKILLS

- **Languages:** Python, JavaScript, C/C++, Rust, Java, Assembly, Powershell, JCL
- **Technologies:** FastAPI, LangGraph, LangChain, OpenAI SDK, VercelAI SDK, Next.js, MERN, AWS (Lambda, S3, Opensearch, API Gateway), Docker, Electron, NS3, TensorFlow, MATLAB, SUMO, Mainframe, Git, Yeoman

ACCOLADES

- **KVPY:** Recognized as a Kishore Vaigyanik Protsahan Yojana Scholar in 2017-2018
- **Deloitte:** Honored with 3 Excellence Awards for development of the S2SACC Add-in and the OpenText Server upgrade
